EDUCATION

India **Rajiv Gandhi Proudyogiki Vishwavidyalaya** **2022 - 2026**

- **Specialization:** B. Tech in Computer Science Engineering
- **CGPA:** 7.92

Indore, India **Golden International School** **2017 - 2022**

- **Education:** Higher and Higher Secondary Education

SKILLS

Programming Languages: C, C++, Python, JavaScript, SQL
AI & Machine Learning: Google Gemini API, Hugging Face Transformers
Web Technologies: HTML, CSS
Tools & Platforms: Git, GitHub, Linux, Docker, MySQL
IoT & Embedded Systems: ESP8266, Arduino Uno, ThingSpeak
Courses: DSA, OOP, OS, DBMS, CN

PROJECTS

TruthInBite (Food Label Analyzer):- Python, Streamlit, Google Gemini API, Pandas, Pillow

- Automated food-label extraction with Gemini OCR, **reducing manual data-entry effort by 90%** across product, ingredient, nutrition, and allergen information.
- Optimized AI processing with a 3-stage pipeline, model fallback chain, and retry handling, achieving **95%+ successful processing** across tested image
- Implemented a **deterministic personalization engine** supporting health and dietary profiles using keyword rules and per-serving nutrition calculations.
- Designed a **5-tab responsive UI** with Pandas, color-coded health verdicts, and budget-based Indian alternatives, processed images entirely in memory.

SecureVault (Encrypted Document Vault):- Python, Flask, SQLite, rclone

- Strengthened document security with AES-256-GCM and PBKDF2-SHA256, maintaining **0 plaintext files on disk** during upload, storage, and retrieval testing.
- Optimized secure sharing workflows with tokenized links, OTP verification, access limits, watermarking, DRM controls, and instant revocation, **reducing sharing setup time by 70%**.
- Integrated **rclone cloud sync** with S3/Google Drive/Dropbox compatibility, document search/filtering, dashboard statistics, themes, and configurable security settings.

LaTeX Resume Generator:- Python, Flask, Jinja2, LaTeX, JavaScript, Puter.js

- Built a **Flask-based resume generator** that converts structured JSON into LaTeX resumes, compiles PDFs via **pdflatex** in isolated temporary directories, and provides live preview, download, and LaTeX source.
- Optimized LaTeX compilation reliability with custom Jinja2 delimiters and input sanitization, achieving **95%+ successful compilation** across tested resume inputs.
- Developed a dynamic 9-section resume builder with add/remove entries and maintained backward compatibility with the legacy Streamlit version.
- Integrated **Puter.js browser-based AI** for skill categorization, grammar improvement of experience, project, and publication descriptions without requiring an API key.

Weather Monitoring System Using IoT:- ESP8266, DHT11, ThingSpeak API

- Automated temperature, humidity, and rainfall monitoring using ESP8266 and DHT11/rain sensors, **eliminating manual readings** during continuous testing.
- Enabled real-time web monitoring over Wi-Fi with ESP8266WebServer, achieving **sub-2-second dashboard refresh latency** during local-network testing.
- Implemented **ThingSpeak cloud logging** via HTTP POST, recording rain, temperature, and humidity data every 10 seconds for remote monitoring and historical analysis.
